

Volume Housing

KB² have a proven track record in the residential sector producing foundation designs for the most testing of sites, from piled foundations to traditional strips and rafts. We are experts in designing retaining walls, pumping stations and culverts can be incorporated where necessary.

KB² have produced both standard house type and flat block designs for major volume house builders as well as with individual bespoke units and site specific variations.

We provide a comprehensive structural engineering package with flood risk assessments, public health works, estate road design, Section 106 and Section 38 agreements.

Once the projects are completed on site we can provide a full range of structural engineering services, structural defect surveys, remedial works, fire surveys and impartial expert witness work.

To discuss your needs, contact us at info@kb-2.co.uk or telephone 0117 949 7949

KB² Consulting Civil & Structural Engineers

Providing engineering certainty by delivering intelligent designs, minimising project risk and applying principles of sustainability.
